

## ICD-10-CM A&P Module: Chapter 14 - Diseases of the Genitourinary System (N00-N99)

### Course Description

The **ICD-10-CM A&P Module Chapter 14 Diseases of the Genitourinary System** is designed to enhance coding professionals' knowledge in anatomy, physiology, and pathophysiology terminology for conditions related to the genitourinary system. This module reviews the ICD-10-CM Chapter 14 categories (N00-N99) and ICD-10-CM terminology as it relates to genitourinary coding. This module concludes with a 20-question final self-assessment test to assess your practical knowledge of the skills reviewed.

### Learning Objectives

- ✔ Explain the main function of the urinary system and identify the major organs involved
- ✔ Describe the kidney's structure beginning from its outer capsule and moving toward its nephron
- ✔ Understand GFR and identify its use in medicine
- ✔ Identify male reproductive system anatomy (internal and external) and name the primary organ
- ✔ Identify female reproductive system anatomy (internal and external) and name the primary organ
- ✔ Explain the difference between nephritic and nephrotic syndrome
- ✔ Identify the 3 causes of acute renal failure and give examples of each
- ✔ Understand the diagnostic criteria for acute renal failure developed by AKIN and ADQI (RIFLE)
- ✔ Recognize the different stages of CKD based on GFR
- ✔ Apply ICD-10-CM guidelines for coding CKD due to other diseases such as HTN and DM
- ✔ Understand why CKD is the most common cause of secondary hyperthyroidism
- ✔ Define BPH, hydrocele and testicular torsion
- ✔ Identify common sites of PID and the names of the 2 most common organisms involved
- ✔ Discuss the underlying physiology of endometriosis
- ✔ Understand the different types of female genital prolapsed
- ✔ Explain the difference between CIN I, CIN II, and CIN III
- ✔ Be aware of the 4 different types of FGM

This course also qualifies for **2 hours** towards AAPC and AHIMA's new ICD-10 CE
